

Sell-Side Trading Solutions

FlexOMS

Order Management System

Cover the complete order management lifecycle from order receipt to trading and middle office in an integrated modular-based platform

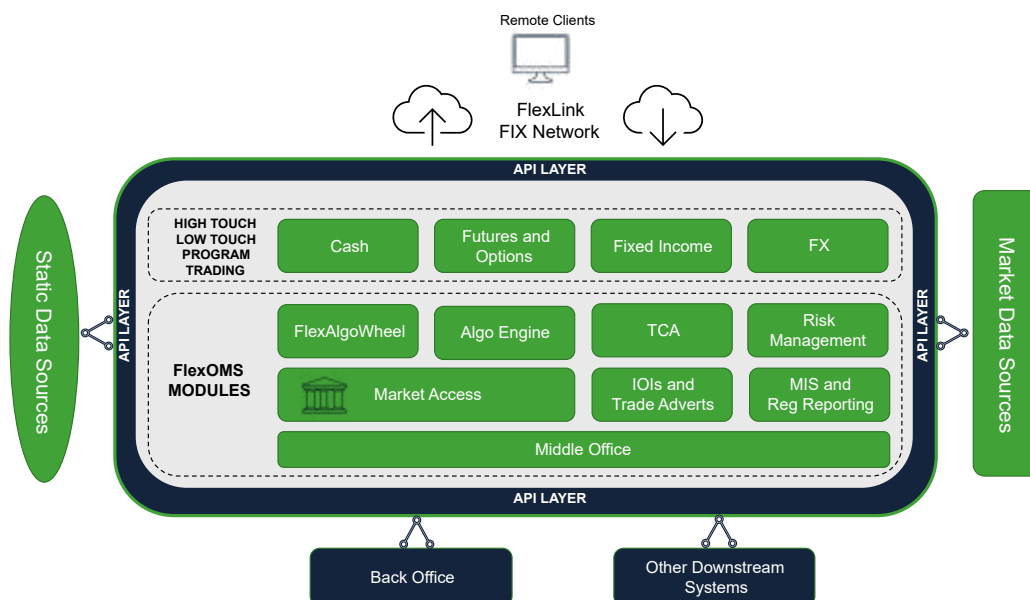

In today's competitive environment, cutting-edge technology matters for sell-side trading desks. From diversification to new asset classes to seamlessly handling changing and complex client demands, an innovative and customizable OMS technology platform is now crucial to keep pace and standing out in the market.

However, the pace of change and rising cost-to-income ratios have meant that existing in-house or legacy vendor technology, and the services underpinning them, no longer match the evolving client and market demand. Therefore, a sell-side technology partner with open architecture and advanced automation strengthened by tailored expert service is paramount to success and supporting clients' businesses now and in the future.

Why FlexOMS?

FlexOMS is designed to boost trading efficiency for banks, brokers, market makers, across proprietary and agency trading by simplifying the complexities of today's trading workflows.

As an open-architecture trading solution, FlexOMS supports high-touch and low-touch businesses by providing a unified, automated multi-asset platform across Cash, Program Trading, Futures & Options, ETF, Swaps, Fixed Income and Foreign Exchange workflows.

About us

FlexTrade Systems is a global financial technology firm that aims to boost trading efficiency by simplifying the complexities of today's trading workflows by providing a unified, open-architecture multi-asset sell-side trading platform. FlexTrade achieves this by underpinning cutting-edge, API-rich technology with highly-specialized service and support for high touch and low touch businesses across cash, program trading, futures & options, ETF, swaps, and foreign exchange workflows. Whether the focus is market-making, agency, retail, or proprietary trading desks, FlexTrade can enhance STP for the complete order management lifecycle from order receipt and trading to middle and back-office workflows, in a single modular technology platform.
