Conquer Fragmentation and Access Trading Protocols Electronically

The automation and electronification of the global institutional credit and corporate bond markets continues to evolve with lighting speed. Less than a decade ago, trading was done almost exclusively over the phone or via fax. Liquidity was fragmented, the marketplace lacked transparency and trading was inefficient and error prone. Furthermore, clients are increasing their consumption of analytics and automation solutions, seeking for a fully automated front-office customized trading solution.

Revolutionizing the Secondary Credit Markets

There is an ever-increasing demand from both buy side and sell side for seamless single-source EMS access to global fixed income liquidity and emerging trading protocols. This makes electronic trading an essential strategic technology component to achieving greater efficiencies in trade execution management in the secondary credit market and in the pursuit of Alpha performance strategies for asset managers, professional traders, and institutional investors.

FlexTrade is keenly aware of this demand. For 25 years, we have been a pioneering force in revolutionizing the way the world trades by providing industry-leading solutions that seamlessly access and efficiently source global credit and corporate bond liquidity.

Why FlexTRADER Fixed Income?

FlexTRADER Fixed Income (FlexFI) provides an open and flexible fixed income EMS that allows clients to do what they do best—TRADE—and navigate a highly regulated landscape in a compliant, consistent, and cost-effective manner.

Deep Integration Provides Streamlined Order and Instrument Workflows and Customization

Streamline Order Workflows: Trade credit instruments directly with buy-side all-to-all counterparties on multiple platforms, without leaving the FlexFI EMS platform. FlexFI eliminates time consuming order staging workflow requirements enabling clients to open a FlexTrade trading ticket within the FlexFI EMS, and trade directly and aggregate liquidity more efficiently across multiple all-to-all trading platforms.

Instrument Workflows: We cover a breadth of instruments and corresponding work flows under fixed income and OTC, allowing for entire trading operations to move onto the FlexFI EMS platform

Customizable Data Widgets: A customizable “grid view” allows traders to normalize Level 2 quote information, historical dealer activity, and Trace/Trax prints.

Other Key Features

Benefits

| | |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pricing Aggregation | Enhance your trading workflows by aggregating price feeds, feed views, and all single normalized API and axes on one screen. |
| Direct Venue Connectivity and Aggregation | Leverage direct connectivity to all liquidity providers (primary and regional dealers, hedge funds, investment managers) along with integration into CLOB's and other emerging sources of liquidity. |
| Inbound Firm Liquidity | Fulfill the immediacy to trade with efficiencies gained in cost to trade through actionable Click-to-Trade (CTT) pricing from inbound banks, aggregators, dealers, and LPs. |
| Trading Protocol Aggregation | Seamless access all newly emerging protocols including All-to-All (Open Trading), streaming, automation, price making and request-for-quote (RFQ), from one source. |
| Voice Trading Automation | Reduce clicks with automated Bloomberg VCON matching (and operational risk). |
| Direct Bank Feeds | Receive dedicated price feeds directly from banks and avoid "screen hopping" and reduce UI friction between different platforms. |
| Flow Automation | Automate low-touch flow to focus on those trades that require additional monitoring and expertise. |
