

FlexNOW

Multi-asset EMS built for the cloud

One-click installation with same-day onboarding for traders, brokers and algos. Broker-neutral trading platform based on FlexTrade's industry experience and trader feedback.

Desktop

1 Click Install

Get setup to trade in minutes. Securely connect from anywhere via internet with SSL encryption. Seamless transition to trade from home or DR site. Trade without access to market data.

FlexLink FIX network

Access 300+ brokers with 1000's of algos via FlexTrade's comprehensive FIX network. 24/6 global support

Global Baskets

Trade global baskets of over 2500 stocks. Share the trade blotter with your team anywhere in the world.

Merging/Allocation

Merge multiple orders with allocations seamlessly flowing back to your OMS. Pro-Rata or custom set ratio's based allocation.

Real-time TCA

Analyse historical trade data in the app. View broker and algo performance. Measure best execution. Export to file or DB and access via API.

Quick Feature Rollout

Quick response to clients requests. Continuously evolving product with 4-6 seamless automatic upgrades every month.

Actionable IOIs

See real-time updates on liquidity direct from your brokers and trade against actionable IOIs.

AWS

High availability and rapid recovery times. No infrastructure to manage, screens for non-trading users.

Mobile

Secure

Two factor authentication, biometric login and fully encrypted communications keep your trading activity safe.

Fully-featured

Complete order management with access to all your brokers and real-time notifications of trade events. Available for both iPhone and Android in multiple languages.

Compliant

Designed to meet strict compliance requirements with data leakage prevention, mobile device management (MDM) and trading or view-only options fully selectable.

API

All Language Support

Our API uses the HTTP protocol that powers the internet, so you use it from any programming language that can access the web e.g. Java, C++, C#, Python, etc.

Systems Integration

Send orders and access your full trade history making it simple to integrate into your proprietary trading model, back testing simulator, downstream middle/back office systems or whatever else you need.
